

REMOTE WORK

Cybersecurity Awareness

Protect company data and maintain security standards while working from anywhere. Your home office is part of our security perimeter.

Secure Your Workspace

Work in a private area, lock your screen when away, and ensure confidential information isn't visible to others or on video calls.

Use Company VPN

Always Connect to the company VPN before accessing any work systems. Never use public Wi-Fi for sensitive work activities.

Keep Devices Updated

Install security updates promptly, use company-approved software only, and enable automatic screen locks with strong passwords.

Use Approved Cloud Services

Store and share files only through company-approved platforms. Avoid personal cloud storage for work documents.
